DETAILED ACTION

1. **REASONS FOR ALLOWANCE:**

Claims 1, 3, 6-12, and 17-19 are allowable because the application is directed to a nonobvious improvement over the invention described in Patent No. US 5,583,527 (Fujisaki et al.). The improvement comprises:

an individual power detector for detecting an individual current supplied from at least one data driver among said data drivers to said data electrode, and for generating an individual power control signal in response to said temperature signal when said individual current exceeds a predetermined current level; and

a protection signal output circuit which outputs a first protection signal to restrain an operation of said data drivers to said control circuit in response to said total power control signal and which outputs a second protection signal to restrain an operation of said at least one data driver to said control circuit in response to said individual power control signal. *This patentable distinction is included in independent claims 1 and 3.*

detecting an individual current supplied from at least one data driver among said data drivers to said data electrode;

generating an individual current control signal in response to said temperature signal when said individual current exceeds a predetermined current level;

restraining an operation of said data drivers in response to said total power control signal; and

restraining an operation of said at least one data driver in response to said individual current control signal. *This patentable distinction is included in independent claim 12.*

detecting an individual current supplied from at least one data driver among said data drivers to said data electrode;

generating an individual current control signal in response to said temperature signal when said individual current exceeds a predetermined current level: and

restraining an operation of said at least one data driver in response to said individual current control signal;

wherein said restraining the operation of said drivers further comprises deleting sub-fields sequentially from a least significant bit among sub-fields that compose one frame. *This patentable distinction is included in independent claim 18.*

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
